

An Internship Report
Of
AWS Gen AI Virtual Internship

Submitted
To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech (Computer Science and Engineering)

By

Roll Number of Student: 2410030704

Name of Student: AYUSHI SINGH

Batch: 2024-2028

CANDIDATE'S DECLARATION

I, AYUSHI SINGH, do hereby declare that the internship report titled “AWS Gen AI Virtual Internship” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own and has not been submitted to any other institute for any degree/diploma requirement, and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature:-

Student Name: AYUSHI SINGH

Roll No.: 2410030704

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I would like to thank the AICTE – EduSkills Virtual Internship Program team, EduSkills Academy, and AWS Academy for providing me the opportunity and the structured platform to learn and gain hands-on exposure in the domain of AWS Gen AI. I am also thankful to my institute, IILM University, Greater Noida, and the faculty of the School of Computer Science and Engineering for their continuous support and encouragement.

I express my gratitude to my parents for their blessings.

Signature:-

Student Name: AYUSHI SINGH

Roll No.: 2410030704

Certificate of Virtual Internship

This is to certify that

Ayushi Singh

IILM University, Greater Noida

has successfully completed the 8-weeks

Gen AI Virtual Internship

During April - June 2026

May this Internship learning propel you toward a bright and successful career.

Internship Offer Letter

Student Name : Ayushi Singh
Stream : B.Tech
Branch : B.Tech(Computer Science and Engineering)
Institute Name : IILM University, Greater Noida
Internship Domain : AWS Gen AI
Internship Duration : April 2026 - June 2026
AICTE Student ID : STU69e63c9a3e7a01776696474

We are pleased to inform you that you have been selected for the 8-Week **AICTE – EduSkills Virtual Internship Program**.

During this internship, you will learn and demonstrate industry-relevant skills that will enhance your employability and strengthen your confidence in the subject area.

The program is designed to provide structured learning combined with practical exposure.

Internship Structure & Evaluation:

- The internship will follow a **week-wise structured learning plan**.
- You will be required to complete **weekly assessments** to track your progress and understanding.
- Certain modules will require submission of **project documentation and assignments**.
- In the final week, you must appear for a **Final Assessment Test**.
- The final grade will be based on your overall performance, including weekly assessments, project submissions, and the final test.

Upon successful completion of all required steps and assessments, you will be awarded a **Virtual Internship Certificate**.

Please note that this offer letter will be considered valid only after the successful completion of the internship program and fulfillment of all assessment requirements, including obtaining the final completion certificate. Without the final completion certificate, this offer letter shall not be treated as a valid document for any official purpose.

The week wise Structure of the Internship is as Follows:

Week	Module	Description
Week 1	Machine Learning Foundation	Explore resources, documentation, and whitepapers. Learn machine learning problem-solving with Amazon SageMaker, including demos, data splitting, and training models using XGBoost.
Week 2	Machine Learning Foundation	Forecasting with managed services, explore computer vision for image and video analysis, and get an overview of natural language processing.
Week 3	Machine Learning Foundation	Generative AI, explore Amazon CodeWhisperer and AWS documentation, and prepare for the AWS Certified Machine Learning – Specialty certification.
Week 4	Natural Language Processing	AWS Academy NLP. Learn NLP fundamentals, text processing techniques, and practical applications in natural language processing.
Week 5	Natural Language Processing	Implement sentiment analysis, and explore information extraction and topic modeling for practical NLP applications.
Week 6	Natural Language Processing	Work with languages, implement generative AI solutions, and conclude the course with a comprehensive wrap-up
Week 7	Generative AI Foundations	AWS Academy Generative AI. Learn AI fundamentals, explore generative AI, use prompts and prompt engineering, and work with Foundation Mode.
Week 8	Generative AI Foundations	Generative AI responsibly, address security, governance, and compliance, implement AI solutions effectively, and prepare for related certification pathways.
Final Credential Validation/Internship Grade Point Assessment		

Note: There is no stipend associated with this internship.

We congratulate you on your selection and wish you a successful learning journey.

4. PROJECT DESCRIPTION

4.1 Introduction

This report presents a detailed account of the 8-week Virtual Internship undertaken under the AICTE – EduSkills Virtual Internship Program, in the domain of “AWS Gen AI”, with curriculum provided by AWS Academy. The internship was carried out from April 2026 to June 2026 as part of the requirement of the Bachelor of Technology (Computer Science and Engineering) programme at IILM University, Greater Noida.

The primary aim of this internship was to build a strong practical foundation in Machine Learning, forecasting, computer vision, and Natural Language Processing (NLP) using Amazon Web Services, and to progressively extend this foundation into the principles and responsible use of Generative AI.

The internship followed a structured, week-wise curriculum combining conceptual learning with hands-on assignments and weekly assessments, culminating in a Final Assessment Test and a Final Credential Validation / Internship Grade Point Assessment. On successful completion of all the requirements, a Virtual Internship Certificate with an “Outstanding” grade was awarded by EduSkills Academy under the patronage of AICTE and the National Internship Portal.

4.2 Organization Profile

EduSkills Academy is an ISO 9001:2015 and ISO/IEC 20000-1:2018 certified organization working under the theme “Nation Building Through Skills”. EduSkills partners with the All India Council for Technical Education (AICTE) to run the AICTE – EduSkills Virtual Internship Program under the patronage of the AICTE National Internship Portal. For the AWS Gen AI track, EduSkills collaborates with AWS Academy to design an industry-aligned, week-wise curriculum covering machine learning, forecasting, computer vision, NLP, and Generative AI foundations, helping engineering students build practical cloud-based AI/ML capability.

4.3 Problem Statement

Although a large number of engineering students learn the theoretical foundations of machine learning during their academic coursework, very few get structured, hands-on exposure to building and training models on an industry-standard cloud platform such as Amazon Web Services. Concepts such as managed forecasting, computer vision, natural language processing, and Generative AI are often understood only at a theoretical level, with little practice in using cloud-based tools like Amazon SageMaker or in applying prompt engineering and responsible-AI principles to real problems. The problem addressed by this internship was to practically learn and apply the AWS-based machine-learning and Generative AI workflow – from data splitting and model training, through NLP and computer-vision fundamentals, to using and governing Generative AI solutions responsibly.

4.4 Project Objectives

- To explore AWS machine-learning resources, documentation, and whitepapers, and solve ML problems using Amazon SageMaker, including data splitting and model training with XGBoost.
- To understand forecasting with AWS managed services and gain an overview of computer vision for image and video analysis.
- To gain an overview of natural language processing and its practical applications.
- To explore Generative AI concepts, Amazon CodeWhisperer, and AWS documentation as preparation for the AWS Certified Machine Learning – Specialty certification pathway.
- To learn NLP fundamentals and apply text-processing techniques to practical problems.
- To implement sentiment analysis and explore information extraction and topic modeling for NLP applications.
- To implement Generative AI solutions while working with multiple languages and consolidate NLP learning through a comprehensive wrap-up.
- To learn AI fundamentals through AWS Academy Generative AI, and apply prompts, prompt engineering, and foundation models.
- To understand how to implement Generative AI responsibly, addressing security, governance, and compliance.
- To successfully clear the Final Assessment Test and the Final Credential Validation / Internship Grade Point Assessment.

4.5 Scope of the Project

The scope of this internship spans the AWS-based machine-learning and Generative AI workflow – starting with ML problem-solving and model training using Amazon SageMaker and XGBoost, moving through forecasting with managed services and an overview of computer vision, and extending into natural language processing, including sentiment analysis, information extraction, and topic modeling. It further covers the foundations of Generative AI – prompts, prompt engineering, and foundation models – along with the responsible use of Generative AI, addressing security, governance, and compliance. The internship was limited to a virtual, simulation/lab-based learning environment provided by AWS Academy and EduSkills Academy, and did not involve deployment on any live organizational production system.

4.6 Technologies and Tools Used

- Cloud & ML Platform: Amazon Web Services (AWS), Amazon SageMaker
- Machine Learning: XGBoost, data splitting and model training/demos
- Developer Tooling: Amazon CodeWhisperer, AWS documentation
- Natural Language Processing: Text processing, sentiment analysis, information extraction, topic modeling

- Generative AI: Prompts and prompt engineering, foundation models, AWS Academy Generative AI curriculum
- Governance: Security, governance, and compliance practices for responsible AI

4.7 System Architecture

The general architecture followed during the internship for the AWS Gen AI learning track can be summarized in the following layers:

- Data & Model Layer: Machine-learning models are trained and evaluated using Amazon SageMaker, with data splitting and training performed using XGBoost.
- Forecasting Layer: AWS managed services are used to explore time-series forecasting scenarios.
- Vision & NLP Layer: Computer vision is explored for image and video analysis, while NLP techniques cover text processing, sentiment analysis, information extraction, and topic modeling.
- Generative AI Layer: Foundation models are accessed and directed through prompts and prompt engineering to generate outputs for defined tasks.
- Governance Layer: Security, governance, and compliance considerations are applied to ensure Generative AI is used responsibly.
- Assessment Layer: Weekly assessments, project documentation/assignment submissions, a Final Assessment Test, and a Final Credential Validation / Internship Grade Point Assessment track progress and final grading.

4.8 Methodology

The internship followed a structured, week-wise methodology combining conceptual learning, hands-on labs, and assessments, culminating in a Final Assessment Test, as summarized in the table below.

Week	Module	Description
Week 1	Machine Learning Foundation	Explore resources, documentation, and whitepapers. Learn machine learning problem-solving with Amazon SageMaker, including demos, data splitting, and training models using XGBoost.
Week 2	Machine Learning Foundation	Forecasting with managed services, explore computer vision for image and video analysis, and get an overview of natural language processing.
Week 3	Machine Learning Foundation	Generative AI, explore Amazon CodeWhisperer and AWS documentation, and prepare for the AWS Certified Machine Learning – Specialty certification.
Week 4	Natural Language Processing	AWS Academy NLP. Learn NLP fundamentals, text processing techniques, and practical applications in natural language processing.

Week	Module	Description
Week 5	Natural Language Processing	Implement sentiment analysis, and explore information extraction and topic modeling for practical NLP applications.
Week 6	Natural Language Processing	Work with languages, implement generative AI solutions, and conclude the course with a comprehensive wrap-up.
Week 7	Generative AI Foundations	AWS Academy Generative AI. Learn AI fundamentals, explore generative AI, use prompts and prompt engineering, and work with Foundation Model.
Week 8	Generative AI Foundations	Generative AI responsibly, address security, governance, and compliance, implement AI solutions effectively, and prepare for related certification pathways.
Final Assessment Test / Final Credential Validation / Internship Grade Point Assessment		

Note: There was no stipend associated with this internship.

Each week concluded with assessments to evaluate conceptual understanding, and certain modules required submission of project documentation and assignments. In the final week, a Final Assessment Test was conducted, and the overall grade was based on performance across weekly assessments, project submissions, and the final test.

4.9 Expected Outcomes

- Ability to solve machine-learning problems and train models using Amazon SageMaker and XGBoost.
- Working understanding of forecasting with AWS managed services and an overview of computer vision for image and video analysis.
- Practical exposure to natural language processing, including text processing, sentiment analysis, information extraction, and topic modeling.
- Understanding of Generative AI foundations, including prompts, prompt engineering, and foundation models.
- Awareness of security, governance, and compliance considerations for using Generative AI responsibly.
- A completed set of weekly assessments and project submissions, along with successful clearance of the Final Assessment Test and Final Credential Validation / Internship Grade Point Assessment, resulting in an “Outstanding” grade.

4.10 Certificates of Completion and Communication Proof

The Internship Offer Letter and the Internship Completion Certificate issued by EduSkills Academy, confirming successful completion of the 8-week AICTE – EduSkills Virtual Internship Program in AWS Gen AI, are attached in Chapter 3 of this report. The official completion e-mail from EduSkills Foundation is attached below as further communication proof.

Internship Completion Certificate

Dear **Ayushi Singh**,

Congratulations!

You have successfully completed **10 weeks AWS Gen AI** internship with **EduSkills Foundation**. Your certificate is ready — please log in to your profile and download it.

Steps to Download Your Certificate:

1. Login at: <https://aicte-internship.eduskillsfoundation.org/>
2. Go to the **Certificate Section** from your sidebar
3. Click **Download Certificate**

Please post your certificate on your **LinkedIn**
